

## Cologne International Graduate School

From Embryo to old Age,  
Development, Health and Disease

### 8 Fellowships

3-year Ph.D. programme starting fall 2010

The University of Cologne has a long-standing tradition and world-wide reputation for top-level molecular biological research. Beginning in Fall 2010 the Research School in Biology "From embryo to old age: the cell biology and genetics of health and disease" will be offering a high-level Ph.D. programme for students with excellent qualifications. The participating research groups use **microbial**, **plant** and **animal** model systems to investigate cell biological and genetic mechanisms whose perturbation during the life cycle of an organism results in disease.

The three-year programme starts with a six-month rotation and course period, followed by a PhD project in one of the participating groups. Seminars and training courses complement the research work. Comprehensive support is provided throughout the programme. The programme language is English. Accepted students will receive a laptop computer and 500 EUR to get started in Cologne. No tuition fees are charged.

Eight competitive three-year fellowships (initially 1100 EUR, then 1400 EUR per month) are available.

We invite you to apply to the IGSDHD in Cologne, the exciting city in the heart of Europe.
